

Daily Stand Up(08/31)

• What did you do yesterday?

Darian: Added some more features such as homepage redirection to registration.

Matthew: Finished implementing frontend and backend for the register/login

Allen: Added backend code to create listing

Justin: Created the UI front end for the “Create a new listing” function

Max: Finish a majority of the Login UI, adding forgot password and homepage redirect.

• What will you do today?

Darian: Research how to make a categories bar.

Matthew: Finish register by also checking if an email is already in use

Allen: Added code to test dummy listings into database

Justin: Fix some minor issues in the UI front end for “Create a new listing” function and create a “Listings” table inside our database

Max: Create an “Incorrect password/username” when logging in and make some small adjustments to the UI.

• What is blocking your progress?

Darian: Need more reference on category bar designs

Matthew: Lambda is not properly querying the dynamodb for the email

Allen: Missing frontend to properly test creating a listing in database

Justin: Not too familiar with AWS so creating the backend will take some time

Max: Issue with sizing and placement of login button.
