Daily Standup 1
8-23-23

Today we talked about the current state of our project. The group members and I did not work on the project over summer and we were getting accustomed with all the software again. The main subject of the meeting was about what we need to do and we assigned each member a task to do.

Things We Need to Do:
Create an Account
- Implement that with backend (**Matthew**)
- Complete UI (**Darian and Max**)
- Debug the login (**Matthew**)

Basic back end to create posts, users, etc.
- The item name, description, date created, etc…(**Alan**)

Basic homepage layout
- Create the basic layout and include the important stuff in the header (**Justin**)
